

perma and ascende stayed in the appartement that day  
it was a very spacious one with a balcony overlooking the river saine

perma looked down herself at her naked body  
while walking around for hours in the rooms and  
on the balcony  
all of her, hair included blended in perfectly to the background from the viewpoint  
of the observer, in this case herself as well as ascende occasionally

he was sunbathing on the balcony floor, naked too  
the neighbours he had on the same height of buildings were  
free thinkers like himself not adverse to seeing others naked  
the tastes of sunshines ... he was noticing ... from the early morning  
sun like smelling a flower to the strong midday one coming into his bloodstream  
with deep nurturing carbohydrate and protein similarities ... to the gentle evening sundown  
bringing with a coconut pumpkin soup richness  
as he was feasting himself on the several varieties of sunrays  
perma was thinking about how she could turn this blending in off and on  
that was quickly learnt, she just had to think of herself in pink nude skin like she remembered herself  
from yesterday looking in the big mirrors in ascendes appartements bathroom  
when she was back to human appearance again, she put on clothes and that was the signal  
for the chameleon features to stay inactive  
she went out to the balcony to talk to ascende how to proceed with the experiments

ascende was happily laying there on the balcony, near drunk from all the sun blessing and nurturing  
so he was the ecstatic then when perma came out

hey, you are back to pure human again so it looks

perma ... somehow, but i think as soon as i take the clothes off and free my mind of human society conduct rules ...  
the animal freedom will come back instantly, for what i am so utmost happy, it is a real homecoming for me this  
cells of mine and the chameleon to have fused so marvellously, thank you so much ascende for helping me to achieve this  
...  
to be honest with you, although i still think some millions or billions of androids what help humanity to get out of having-to-work  
is of highest importance for the suffering and being diminished wildlife areas on this planet ... the goal nearest to my heart is to  
personally reconnect my genes with the ones of all my relatives, all my family of human animals and plants ...

with ascende jumping in after having listened to her with admiration ... and not to forget the stones and the elementals fire water  
earth and air ... and the temperature thing ...  
i share that goal with you, i too want to complete my abilities and features, i too want to be all of what my family on this planet can be ...  
and i believe that eventually ... the other members of the family will pick up the trick once its done in a certain intensity quality and quantity

perma ... so you are saying that we might feed into the mental global cloud or the matrix how life feeds and reforms itself ... that our research  
might allow others to perform the same upgrade but perhaps much easier as the blueprints are cosmically accessible in the spiritual database ...

ascende... not only spiritual i think ... i do not know it for sure, but i guess there is a cellular internet somehow too, like ... if we both stay some good  
long times together finding a romantic or collegial understanding of each other ... your skin cells might send mine some evolution upgrade hints and  
mine yours too

perma... especially if we not let other things distract us like the state of the politics here or there, if we focus on our bodies sensations, our feelings, our thoughts

ascende ... and of course we could install cameras in our living rooms so people could watch us intimately, but i do not know if that would help our development

perma ... ah i know what you are thinking, people hanging in front of their laptops watching us having sex while me blending into the background ... mmmh... i think  
that would be an mind enhancing experience for the viewers as my body would only at the contours be seen faintly ... might be an arty looking

ascende ... am getting horny already ... he smiles ... but seriously, i am half this half the other way argumenting with myself  
plus ... the research process being documented on a human volunteer what is interested to evolve into completion and wanting everyone to know the same so we could  
live happily everafter being whatever however all the times  
negative ... if something does not go the way the human volunteer thinks or wishes it would or should look or feel like, shame and embarrassment could settle in

perma...when i agree with you on the shame and embarrassment i still believe that this is a question of the setting, how this live channels are being communicated  
for example, our experiments with plants and cells get over 90 percent thoughtfull and inspiring mind and soul engaging viewers what fuel the processes to a grand  
sombre rolling rrrrrr feeling, it makes me wet tears of joy when i feel how thankfull and enthusiastic their engagement is  
i can not think of this very people, how watch our experiments as they want to help the evolution with their benevolent attention ... i can not think of them looking at  
our sexy moments with a low smeary mind ... and even if someone would feel inspired to masturbate while seeing us on internet tv ... it would not greatly disturb  
me, as i think this person has not enough chances in his offline life to engage in satisfying sexual movements ...  
but then of course i would not want to attract that or to announce our research in the porn world ... but then ... what if some of the hardcore porn watchers would get  
somehow refined in their mind while watching us ... and develop a sense for evolution too, eventually watching less hardcore but reading books on cell biology  
and studying paintings of nudes ... goods appearing as animals to approach humans on a deeper feeling level ...

ascende ... so the mission point of view is overriding the privacy and ridiculness aspects, yes, i can see that

agreed it seemed ... and ascende ordered via internet some new cameras what got delivered the next day, he installed them in the living rooms, in the bathrooms  
balcony everywhere ... for the sharing

before they turned them on, ascende and perma were wondering how they should announce their success

oh never mind, we just turn the camera on with me standing naked in front of a white wall ... and i start dressing myself while i tell the viewers about my meditation at  
the chameleon place, how we lived here together the last two weeks ... actually not doing anything except for keeping the various skin cells alive with nutrients,  
giving them some mediums they could grow in and meet each other ... while watching them with love in our eyes what has been fuelled by our romantic and sexy  
cuddling rubbing sessions

ascende ... and me, i lay on the balcony sunbathing ... with the stream of my not activity, my passive full of thanks receivement state of cellular being satisfied with sungoldfluids  
... being blended in in the lower right corner of the viewers screen...

perma ... after i have introduced you ... actually, why do you want to be small in the lower right corner .... why not keep it simple, i first then you second ... or has that something  
to do with your appartement your financing the experiments ?

ascende ... no, i do not think i am stuck in my name my fame game ... perhaps it is jealousy, kind of i want to be in view when they see you dressing yourself becoming partially  
naked human

perma... flattering, you alpha male me, possess me, i am yours ... mmmh... with an other side of me shouting at this subordinating submissive ... what is going wrong with you,  
you have not engaged with him for the small conservative family movie, you are in it for the advancement of the web of life ... for more choice and mutual satisfaction trough  
empowerment ....  
against pain and degradation ...

with ascende kind of ashamed red in his face stumbling ... yy..aaa.... that is right, i totally see that, what a stupid notion of mine to not let you have your moment ... believe me, i  
am not into  
that small conservative family movie too, although there is some subconscious little bourgeois somewhere shouting his demands for the righteousness of the middle class ...

please tell me next time he comes trough and i utter these kind of patriarchic stuff

most of all i want to trace this dominant stride in me as i myself have felt most of my life some substantial amount of mental pain when people ordered me around

perma ... no worry my man ... we can play it out, like an improvisational theatre piece where i play your submissive wife and you are the great household father

ascende ... with the experiments being our children ... you change it around nicely, thank you for standing with me in this research of myself

perma ... not so much thanks needed, as myself for sure have some of that stuff in me too, kind of ...

the behaviours of others disgusting me i at some low times probably apply too

ascende ... as we have learnt in our cultures ... the good intended uses the same violence to fight the evil intended ...

perma ... not exactly i believe it is with us ... we have not really opponents or a real urgency ... but then ... there is the threat of the dumb-materialistic ones felling most all of the primeval forests for the extraction of gold, oil .... and the constant cloud of pain floating around filled with the animals sufferings ... so yes, this are pains and fears what can impact all sentient beings

ascende ... mmmh... so ... i try to dominate you with jealeous protective looking behaviour ... to react to the domination of the global human mindset what allows society to do

killings of fellow living beings beyond necessity ... naa... but then ... might be part of it, but actually i think this patriarchic style comes kind of ...

i can not see the android crowdfunding and we-the-visionaires building them in millions ... succeeding ...

so i think about it in a more traditional small-scale enterprise way ... for example thousands of supporters wanting to chip in to have their android ... and it all taking longer times

perma... good approach, yes me too has some serious doubts as if there will 500 millions of human beings throw in 5000 during a year of fundraising ... basicly i believe that

if others see our fundraising growing into the thousands ... they will start setting up their own android workshops ...

ascende ... what we actually would like to see, why we did install all the cameras in my appartements ... so everyone would be able to follow ...why should it need 500 million

people contributing to one project ... when it could be 5000 projects manufacturing each 100 000 androids

perma... we eventually could coordinate some of the materials purchase or manufacturing factory settings, machines, buildings

ascende ... it bringing down the shippings to a minimum as most of the parts could be produced local

perma... with that decentralised and open structured multifaceted approach ... your mind then would have left both the megalomaniac ... i am the industrial android producer

freeing mankind of the work-slavery ... and the quenching, cuttinglimiting small company chief attitude ...

ascende ... leading me to a mindset where i would find delight in many potential partners of manufacturing conceptualisation design featurability symbiotic mutual enriching

engagements

oh yes, that feels good in my head, this thoughts delights my brain

with perma hugging him, looking him into the eyes and saying lovingly ... that is how i found you first on the net when you were looking for a partner to study human - animal -

plant symbiotic

relationships with ...
